3.	GADD_Web_Sites.zip, the GADD Web Applications.....	3
4.	Install GADD_5p.zip, the GADD Desktop Windows Applications.....	4

## 1. Introduction

---

This document contains guidance on how to get started with GADD.

## 2. What you need before you start

---

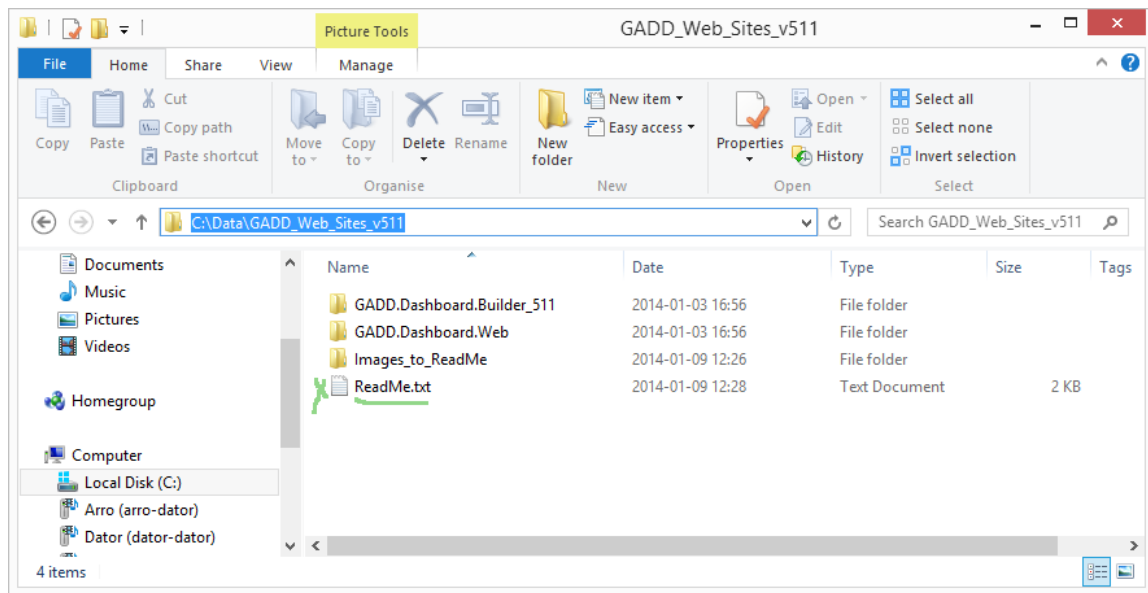

Before you start you need to have the “GADD v5 public package”. It is available in two zip files:

- GADD\_Web\_Sites\_v511.zip, the GADD Web Applications.
- GADD\_5p.zip, the GADD Desktop Windows Applications.

## 3. GADD\_Web\_Sites\_v511.zip, the GADD Web Applications

---

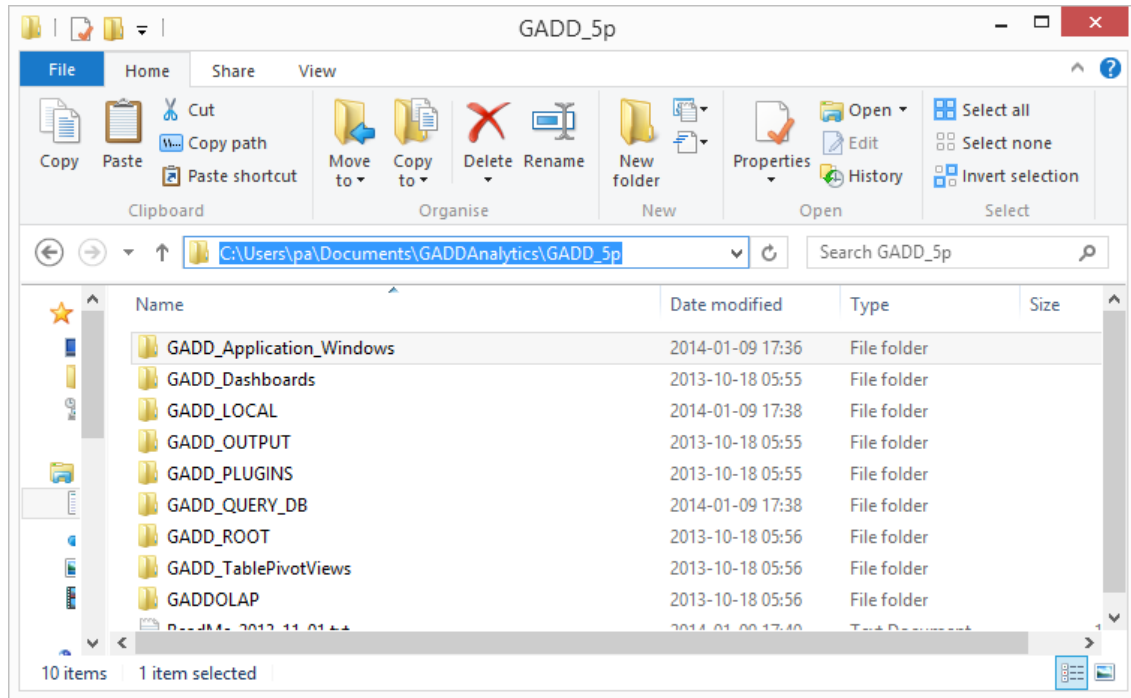

Get the zip and unzip it to *C:\Data\GADD\_Web\_Sites\_v511\*.

Please consult the included documentation to proceed. The file: *GADD\_How\_to\_install\_GADD\_Web\_Server.pdf* is a good place to start.

## 4. Install GADD\_5p.zip, the GADD Desktop Windows Applications

The GADD\_5p.zip includes the Desktop (Windows) applications.

1. Get the GADD\_5p.zip
2. Unzip and read the file ReadMe\_2014-01.txt that is included. It says:
  - a. Place in ...C:\Users\\Documents\GADDAnalytics\GADD\_5p
  - b. E.g; C:\Users\PA\Documents\GADDAnalytics\GADD\_5p
  - c. Start GADDxl.exe in ...GADD\_Application\_Windows by double click!
  - d. Logon with user / password = gadd / gadd

After you have unzipped and placed in correct folder it should look like above folder except for the <user>. In above picture the user is <pa> and that will be replaced with your current user in on your installation.
